

TECH TIP

PRODUCT: DISPENSING VALVE/SFV-1

SUBJECT: SFV1 MODIFICATIONS THAT AFFECT PART INTERCHANGEABILITY

DATE: NOVEMBER 16, 2007

An enhanced version of the SFV1, developed to improve product reliability, will be released January 7, 2007. The new (modified) version of the valve features larger screws and a thicker retainer plate. To accommodate the larger screws the flow body has been modified and the color has been changed from black to white as a means of identifying the change. It is important to note the difference because the screws and plates are not interchangeable. The smaller screws and thinner plate should only be used with the black flow body and the larger screws and thicker plate should only be used with the white flow body.

If the need arises to replace the flow body when servicing the valve, it is recommended that the complete flow assembly be replaced. If the complete assembly cannot be replaced, it is recommended that the retaining plate and screws are re-used and that the flow body be replaced with one of identical color.

The front and top covers have been changed from black to Sabre® gray to match the color of the merchandiser. The black and Sabre® gray covers are interchangeable. All covers can be ordered separately, if necessary.

SFV1 – Old Version	Part Number	SFV1 – New Version	Part Number
Black Flow Body	1907	White Flow Body	620715734
16 Gauge Plate (thin)	1929	11 Gauge Plate (thick)	620046356
#8 Screws (small)	560001108	#10 Screws (large)	620720593
Front Cover (black)	1956	Front Cover (Sabre® gray)	620050574
Front Cover w/ Cut-out (black)	1951	Front Cover w/ Cut-out (Sabre® gray)	620050576
Back Cover (black)	1950	Back Cover (Sabre® gray)	620050575
