## TECHNICAL TIP

**Product: IDC Pro**

**Subject: Nozzle Assembly Water line tubing change**

**Date: 11/19/2020**

### Description:

Effective September 3, 2020 the water lines on IDC Pro nozzle assemblies have been improved using Synflex Flavor Shield PET barrier tubing. The smooth, non-porous PET liner enables maximum flushability and minimizes microbial growth. The tubing is black to distinguish it from the old clear tubing as shown in Figure 1. The Synflex FS tubing is more rigid and must be factory thermoformed. However, the same #10.5 Oetiker clamp and  $\frac{3}{8}$ " spring clamp are used for installation.

**Old Clear Water Lines**

**New Black Water Lines**

### Serial Number Range Affected:

The new water lines were first implemented on unit serial number 62A2036RP001.

### Additional Info:

This is a running design change. Clear water line tubing can continue to be used in installed units. However service nozzle assemblies will all have black Synflex Flavor Shield PET barrier tubing going forward. Part number did not change, see IDC Pro IPL for PN if needed.
